

INFORMATION SHEET N°	49	TARGET	16.7
-----------------------------	----	---------------	------

OUTPUT

Indicator	Accessibility of civic-associative spaces		
Description	Proportion of the population less than a 5-minute walk (400 m along the street route) from a civic-associative space, which includes all kinds of spaces for citizen associations (youth associations, political associations, cultural associations, etc.) and which are considered to be representative of the ability of the inhabitants to participate in public decision-making.		
Type	GIS	Source	Based on the indicator "Participation in Local Forums or similar district participation bodies" of the Strategy for localisation of the SDGs in the city of Madrid

Data source

Calculation method

The civic-associative spaces of the City of Madrid were located using the MMQGIS extension, following the same steps as in SHEET 4. Urban vegetable gardens, creating a table in .csv format to collect the names of the associative spaces, their addresses, the postal code and the city to which they belong.

Associations not found by the extension were entered manually by taking the coordinates from Google Maps and using the Create point layer from table tool.

To locate the associative spaces in Madrid Nuevo Norte, the plots indicated in Doc 3 were selected. Design bases and a point was created in the centre of each polygon using the Centroids tool.

The indicator was calculated by comparing the number of associations per district with its population.

During the activity phase of Madrid Nuevo Norte, the indicator will be updated with the actual figures and locations of the population, the detailed layout of the streets and the actual location of the urban green gardens.
